matik681@gmail.com | lewenbraun.tech | github.com/lewenbraun

## SUMMARY

---

Full-stack Developer with strong PHP skills, focused on optimizing application performance and building robust APIs for complete applications. Utilizes various techniques, architectural best practices, and database optimization to ensure high speed and scalability. Also skilled in Vue.js and TypeScript for developing dynamic and interactive user interfaces.

## SKILLS

---

PHP, Laravel, Symfony, Yii2, JavaScript, TypeScript, Vue.js, PostgreSQL, MySQL, Docker, Elasticsearch, Multi-tenancy, Redis, RabbitMQ, WebSockets, Laravel Reverb, PHPUnit, PHPStan, Tailwind, Quasar, Livewire, jQuery, HTML, CSS

## WORK EXPERIENCE

---

### Poisk123

Oct 2024 – Mar 2025

Backend Developer

- Built a fully featured, real-time customer support chat application using Laravel Reverb and WebSockets, handling over 500 concurrent chat sessions and reducing average customer support response time by 40%.
- Developed a comprehensive suite of unit and integration tests using PHPUnit for a critical module, increasing code coverage by 70% and reducing the number of reported bugs in that module by 20%.
- Created a well-documented external API that enabled new partners to onboard quickly and efficiently, resulting in a 60% reduction in partner onboarding time.

### TTK - Digital Solutions

Jun 2023 – Sep 2024

Full-stack Developer

- Optimized a large legacy CRM project by refactoring 30+ critical database queries, implementing Redis caching 70% hit rate, and integrating Elasticsearch, resulting in a 30% faster API response and a 20% improvement in user latency.
- Developed a dynamic data system capable of ingesting data from over 10 diverse sources, processing thousands of records per hour, and presenting it through a Vue.js frontend for over 30 key business metrics.
- Led migration of more than 50 jQuery frontend components to Vue.js, implementing a state management system, resulting in 60% faster development and 80% quicker bug fixes.
- Designed a new CRM feature using Laravel and Vue.js that automated weekly report generation, saving the team approximately 10 hours per week.

### Webjox

Feb 2021 – May 2023

Backend Developer

- Spearheaded full CRM integration for a franchise network by developing a custom API and robust data synchronization mechanisms, boosting the speed of order placement for customers by 25%.
- Architected and implemented a multi-tenancy solution, leading to a 40% reduction in codebase size, a 15% faster deployment cycle, and significantly improved overall system maintainability.
- Developed admin microservices using Symfony and RabbitMQ to efficiently handle peak loads resulting in a 99.9% uptime for critical administrative functions while maintaining <200ms response time.
- Integrated PHPStan and Psalm into the CI pipeline, elevating code quality scores by 25% and reducing production bugs by 18%.

## Education

---

Don State Technical University – Software Engineering

2024
